	BODY	CONTROLLER	DIAGNOSTIC	TROUBLE	CODES
--	-------------	-------------------	------------	----------------	--------------

ii

1. DISPLAYING DIAGNOSTIC TROUBLE CODES

The ability to display diagnostic trouble codes (DTC) is an optional feature. Codes may be displayed on either the gauge cluster or an optional vehicle information display (VID). **The vehicle must be equipped with the option to display codes in both cases.** Codes will not be displayed on the gauge cluster if the vehicle is equipped with the VID.

1.1. VEHICLES EQUIPPED WITH OPTION TO DISPLAY CODES

1.1.1. Displaying Codes on the Gauge Cluster (Non-VID equipped vehicles)

To display codes on vehicles not equipped with a VID:

- 1. Set the parking brake.
- 2. Turn the key switch to the ACCESSORY position to view only previously active codes. Turn the key switch to the IGNITION position to view both active and previously active codes.
- 3. Momentarily press the Cruise "ON" switch and the Cruise "Resume" switch at the same time.

A gauge sweep will be performed on the gauges. The gauge cluster will then display the following information for 5 seconds:

Software Rev: XXXHardware Rev: XXXActive Faults: XXXTotal Faults: XXX

NOTE – The gauge cluster will only display "Software Rev" and "Hardware Rev" for 5 seconds followed by the message "Diagnostic Trouble Codes are not available" if the vehicle is not equipped with the option to display codes.

If faults are present, the gauge cluster display will show each diagnostic trouble code for 10 seconds and then automatically scroll to the next entry and continue to cycle through the faults. Once all faults have been displayed the number of faults will be displayed again, then the cycle will repeat. To manually cycle through the fault list press and release the cluster display selector button. The following information will be displayed for each fault:

SPN: XXXX FMI: XX

Active

OC: XXX SA: XXX

SPN: XXXX FMI: XX Previously Active OC: XXX SA: XXX

NOTE – Turning the key switch off, turning the key switch to the CRANK position, or releasing the park brake will take the gauge cluster out of the diagnostic mode.

1.1.2. Displaying Codes on the VID (if equipped)

The VID can be used to display all diagnostic trouble codes (DTC) on the vehicle. Suspect parameter number (SPN), failure mode indicator (FMI) and occurrence count numbers are listed. Source addresses and DTC descriptions are presented in plain text.

NOTE - The VID will display "Not Available" if a DTC description is not available for a particular fault.

Displaying codes will only be allowed if all of the following conditions are true:

- The key switch is in the IGNITION position.
- AND displaying codes is allowed due to vehicle orderable options
- AND the programmable parameter "Diagnostics" is enabled using Diamond Logic® Builder (DLB).
- The vehicle is not moving (the Vehicle Speed is equal to zero).
- The feature is not password protected to prevent unauthorized access. Refer to the Vehicle Information Display Owner's Manual for more information.

Perform the following steps if all of the above conditions are met:

1. Go to the main menu screen

NOTE – The following selections will not be available if the vehicle is not equipped with the option to display codes.

- 2. Select "DIAGNOSTIC CODES"
- 3. Select "ACTIVE" or "INACTIVE". The VID may initiate a password prompt if the VID has been password protected. Refer to the Vehicle Information Display Owner's Manual for more information.

The VID will indicate "NO FAULT DETECTED" if faults are not found. Scroll through the list of faults if faults are present.

The following information will be displayed for each fault:

SPN: FMI OC

SA

DTC Description

2. CLEARING DIAGNOSTIC TROUBLE CODES

Previously active diagnostic trouble codes can only be cleared by a service tool, such as Diamond Logic® Builder (DLB). Some previously active codes may not be cleared by this method.

3. DEFINITIONS

- "SPN" represents the Suspect Parameter Number. This number identifies the item for which diagnostics are being reported.
- "FMI" is the Failure Mode Indicator. This number represents the type of failure detected. Refer to Failure Mode Indicators (FMI) below for more information.

- "Active" or "Previously Active" will be displayed to identify whether a fault is currently active or if the fault
 was previously active.
- "OC" is the Occurrence Count. This number represents the number of times a fault has gone from previously active to active.
- "SA" is the Source Address. This number identifies the module reporting the fault. Refer to Source Addresses (SA) for more information.

3.1. FAILURE MODE INDICATORS (FMI)

- FMI=0 Data Valid But Above Normal Operational Range Most Severe Level
- FMI=1 Data Valid But Below Normal Operational Range Most Severe Level
- FMI=2 Data Erratic, Intermittent Or Incorrect
- FMI=3 Voltage Above Normal, Or Shorted To High Source
- FMI=4 Voltage Below Normal, Or Shorted To Low Source
- FMI=5 Current Below Normal Or Open Circuit
- FMI=6 Current Above Normal Or Grounded Circuit
- FMI=7 Mechanical System Not Responding Or Out Of Adjustment
- FMI=8 Abnormal Frequency Or Pulse Width Or Period
- FMI=9 Abnormal Update Rate
- FMI=10 Abnormal Rate Of Change
- FMI=11 Root Cause Not Known
- FMI=12 Bad Intelligent Device Or Component
- FMI=13 Out Of Calibration
- FMI=14 Special Instructions
- FMI=15 Data Valid But Above Normal Operating Range Least Severe Level
- FMI=16 Data Valid But Above Normal Operating Range Moderately Severe Level
- FMI=17 Data Valid But Below Normal Operating Range Least Severe Level
- FMI=18 Data Valid But Below Normal Operating Range Moderately Severe Level
- FMI=19 Received Network Data In Error
- FMI=20 Data Drifted High
- FMI=21 Data Drifted Low
- FMI=31 Condition Exists

3.2. SOURCE ADDRESSES (SA)

NOTE – The available source addresses will vary depending on each vehicle configuration.

NOTE – Diagnostic Trouble Codes listed in this document are Body Controller, Auxiliary Gauge Switch Pack, Secondary Instrument Cluster, and Instrument Cluster.

Table 1

Module Name	Source Address
